(1) ***** are germs that can cause disease. Most (2) ***** can be seen under a microscope. Viruses, which cause diseases like colds, flu and measles, are much smaller than bacteria.

(3) ***** destroy harmful bacteria directly.

Molecules called (4) ***** recognize and inactivate pathogens. Vaccines stimulate the immune system to fight disease.

A (5) ***** interprets doctors' prescriptions and prepares medication for patients. They assist doctors and patients in finding information about the uses and effects of medications.

Louis Pasteur developed the process of heating liquids to kill germs over 100 years ago; the process is called (6) *****

Avoid contact with another person's (7) *****.

Cover your (8) ***** when coughing or sneezing.

Wash your (9) ***** when dirty and after using restrooms.

Avoid putting harmful (10) ***** (like drugs, tobacco, or alcohol) into your body. They can stress your immune system.

(11) ***** is children's eye health and safety month.

(12) ***** is either of two times during a year when the sun crosses the celestial equator and when the length of day and night are approximately equal.

(13) *** is an abbreviation for the measles, mumps and rubella vaccination.

(14) *****' is the observation, identification, description, experimentation, investigation and theoretical explanation of phenomena.

A (15) ***** is used to measure temperature.

A preparation of a pathogen that causes the body to make antibody against the pathogen is known as a (16) *****.

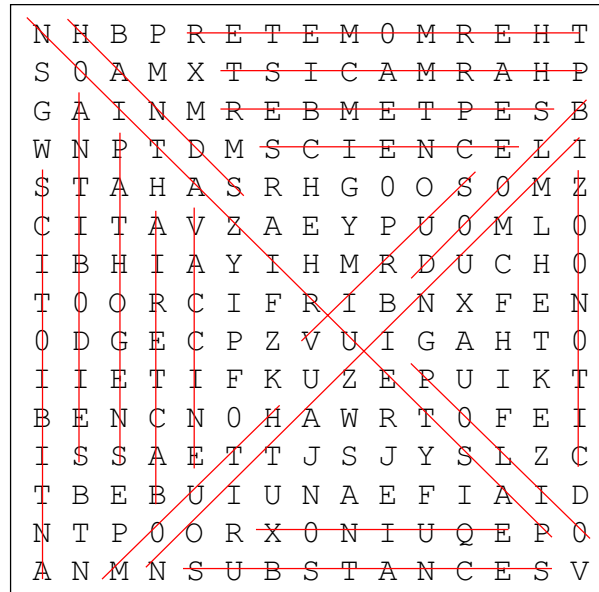

A (17) ***** is made up of tiny particles of protein and genetic material that can not be seen with the naked eye or a microscope.

An (18) ***** produces immunity by an inoculation.

(19) ***** is a disease which causes paralysis.

(20) ***** diseases are those communicable from animals to humans.

SEPTEMBER

(1) Pathogens are germs that can cause disease. Most (2) bacteria can be seen under a microscope. Viruses, which cause diseases like colds, flu and measles, are much smaller than bacteria.

(3) Antibiotics destroy harmful bacteria directly.

Molecules called (4) antibodies recognize and inactivate pathogens. Vaccines stimulate the immune system to fight disease.

A (5) pharmacist interprets doctors' prescriptions and prepares medication for patients. They assist doctors and patients in finding information about the uses and effects of medications.

Louis Pasteur developed the process of heating liquids to kill germs over 100 years ago; the process is called (6) pasteurization.

Avoid contact with another person's (7) blood.

Cover your (8) mouth when coughing or sneezing.

Wash your (9) hands when dirty and after using restrooms.

Avoid putting harmful (10) substances (like drugs, tobacco, or alcohol) into your body. They can stress your immune system.

(11) September is children's eye health and safety month.

(12) Equinox is either of two times during a year when the sun crosses the celestial equator and when the length of day and night are approximately equal.

(13) MMR is an abbreviation for the measles, mumps and rubella vaccination.

(14) Science is the observation, identification, description, experimentation, investigation and theoretical explanation of phenomena.

A (15) thermometer is used to measure temperature.

A preparation of a pathogen that causes the body to make antibody against the pathogen is known as a (16) vaccine.

A (17) virus is made up of tiny particles of protein and genetic material that can not be seen with the naked eye or a microscope.

An (18) immunization produces immunity by an inoculation.

(19) Polio is a disease which causes paralysis.

(20) Zoonotic diseases are those communicable from animals to humans.

ACROSS

- 2 Item used to measure temperature.
- 3 Produces immunity by an inoculation.
- 9 Can be seen under a microscope and some cause strep throat and pneumonia.
- 12 Louis Pasteur developed this process of heating liquids to kill germs over 100 years ago.
- 17 Avoid contact with another person's
- 19 Diseases that are communicable from animals to humans.
- 20 The observation, identification, description, experimentation, investigation and theoretical explanation of phenomena.
- 7 Tiny particles of protein and genetic material that can not be seen with the naked eye or a microscope.
- 8 Person who interprets doctors' prescriptions and prepares medication for patients.
- 10 Germs that can cause disease.
- 11 Molecules that recognize and inactivate pathogens.
- 13 Destroy harmful bacteria directly.
- 14 Either of two times during a year when the sun crosses the celestial equator and when the length of day and night are approximately equal.
- 15 Avoid putting harmful..... (like drugs, tobacco, or alcohol into your body.
- 16 A disease which causes paralysis.
- 18 Cover your..... when coughing or sneezing.

DOWN

- 1 Children's eye health and safety month.
- 4 An abbreviation for the measles, mumps and rubella vaccination.
- 5 Wash your..... when dirty and after using restrooms.
- 6 A preparation of a pathogen that causes the body make antibody against the pathogen.
